MasterPiece Arms

Available in All Black or Black with Stainless Steel Slide.

MADE IN THE U.S.A. LIFETIME WARRANTY.

www.masterpiecearms.com

Once we at MasterPiece Arms decided to build the Protector Series of sub-compact double action only pistols, we chose to stay with what has proven to work best when building a quality firearm - state of the art CNC machined parts from solid steel, no castings, no polymers and no short cuts. If you start solid, you will stay solid.

The quality built and beautifully designed MPA32 and MPA380 Protector Series pistols are available in all Black or with a Stainless Steel upper slide. Both the precision upper slide and lower receiver are machined from solid billets of steel. When assembled, they become one of the highest quality firearms available in this class.

Our firearms are made with the best materials and are built to last a lifetime. They are heavier than polymer, but only slightly. In fact, most people feel they have just about the right weight and balance and unlike polymer the balance does not feel as if it drastically changes as you fire the gun and it becomes lighter with each round fired.

The outside of the slide uses a scalloped design enhancing the beauty of the gun as well as providing a better grip when pulling the slide back. The hammer is slightly recessed increasing the overall safety of the weapon.

When firing our sub-compact weapons you will not only enjoy the comfort of our handle and grip design but you will also feel the added control this superior design gives you when firing the weapon. This comfort, combined with quality parts and workmanship make the MPA Protector Series a solid investment for personal protection.
